

CPSERVUM C07-061

Multifunctional Printer Server

This USB 2.0 multifunctional printer server enables you to add a USB (multifunctional) printer to your network. After installation, the (multifunctional) printer can be used from any computer inside the network without the need to have the printer connected directly to the computer. Now you can print, scan and fax over your network. The printer server is equipped with a network port in order to connect to network devices (for example a switch, network card or router).

Highlights

- Suitable for 10/100Mbps networks
- IP automatic assignment (DHCP)
- Easy Web configuration
